

Update

Reservoir Flies

We are sending you this leaflet to keep you updated on the work we have been doing to try and resolve the problem of swarming flies coming from Audenshaw reservoirs.

This year has been particularly bad for residents and we have received a large number of complaints which we have taken up directly with the various authorities.

Also, at the request of some local residents, a meeting was organised by Andrew Gwynne MP's office with representatives from United Utilities (UU) at which your local Labour Councillors were also present.

As a result, UU have agreed to do more to try to resolve the problem here in Audenshaw:

- To carry out more spraying, especially at the key times of the year and including in adjacent gardens where residents request that;
- To look at other chemical products to see if they will be more effective at killing eggs and larvae;
- To introduce species of fish which eat fly larvae.

Hopefully this will all work, but we are pledged to monitor the situation and demand further action from UU if this does not solve the problem. Please get in touch with us on the contact details overleaf.

Jean Brazil, Councillors Wendy Brelsford and Colin White & Andrew Gwynne MP
